MARK THE CORNER LOCATION ON THE DIAGRAM BELOW AND FILL IN THE CORNER CODE BLANK ON THE OTHER SIDE:
(1) For corners located at the intersection of two lines (Section corners, quarter corners and sixteenth corners): (a) The corner code is the alpha-numeric coordinate from the diagram below that corresponds to the appropriate intersection of lines.

(2) For corners that are not located at the intersection of two lines (Meander corners, DLC's, MES's, reservation boundaries, mining claims, etc.):

(a) For corners that are on one line only the corner code is the line designation and the related line segment; i.o., a corner on line 5 between "8" and "C" is designated BC-5.

(b) For corners that are between lines the corner code is both line segments; i.e., a corner in the SE1/4 of the SE1/4 of section 18 is designated MN-4-5. BOOK 136 PAGE 6/7 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 D E F G H J K Ħ N P Q R S

RCW 58.09.060 (2) requires the following information on this form: an accurate description and location, in reference to the corner position, of all monuments and accessories (a) found at the corner and (b) placed or replaced at the corner; (c) basis of bearings used to describe or locate such monuments or accessories; and (d) corollary information that may be helpful to relocate or identify the corner position.
