Form prescribed by Bureau of Surveys and Maps pursuant to the provisions of Section 5 (2), Chapter 59, Laws of 1973.

CORNER RECORD INDEX DIAGRAM

- The corner record form may be duplicated with the land surveyor's or company name and address

Section and Sectional Subdivision Carners.

Corner Code No refers to an authoritical numerical coordinate number derived from the system shown on the township diagram, i.e., the corner common to sections 5, 6, 7 and 8 is identified by £ 5, the % corner between sections 10 and 15 by 1-15. In those cases where double or triple corners exist, the code number will be for a single point but the corner record must charly show which corner is being reported

Corners such as meander corners, angle points, witness points, etc., which fall on one line only will be identified by the line and line sector, i.e., a corner falling between B and C on line 5 would be coded BC-5 and a corner falling on line E between lines 3 and 4 would be designated E-3-4. Corners common to two or more townships will be properly coded and filed in each townships.

Segregated surveys (DLC, HES, Indian Allotments, Tracts, etc.).

Corners of segregated tracts will be identified by the name or designation of the tract followed by the number assigned that corner during the original survey, or if not so numbered in sequence as established. Example Survey No. 218, Corner No. 5: John D. Smith Donation Land Claim, Corner No. 1; Tract 42, Corner No. 7; Mineral Survey No. 1047, Corner No. 2; Charlie Wood Indian Allotment, Corner No. 2 No. 3.

Corners of segregated tracts may be spatially located by the township code; i.e., MN-4-5 would locate a corner in the SE% SE% of section 18. HJ 9 would locate a tract corner which happens to fall on a section line and should be indexed under both the township code and the segregated

4. Parts 1, 2 and 3 of the record form boil down to: what information and physical evidence may be available by which a corner position may be ascertained; what evidence was recovered to substantiate this position and what physical evidence and corollary information is available to assist the next person recover this corner. Let the kind of a corner record you would like to assist the next person to find be your guide in building this record

Corner records will normally be numbered in sequence for each township as received and the page numbers will be cross indexed on the proper township index plat.
