628 12TH STREET
WASHDUGAL WASHINGTON 98671SURVEY OF SECTION LINE BETWEEN
SECTIONS 25 and 26, T4N R9E, WM

The section line between Sections 25 and 26, T4N R9E, WM was requested to be defined because of an alleged logging overcut from the NE $\frac{1}{4}$ of the NE $\frac{1}{4}$ of Sec 26 into Sec 25.

The US Forestry Department, who made the request, found two old PT's that fitted for the NW Cor of Sec 26 since the original post was not found. The ties located the corner in the NW $\frac{1}{4}$ of the "brook" mentioned by Jacob Richardson as being the claim from the corner in 1892. The discrepancy in the distance does not appear to be unusual since his title to the corner was not a corner but to the edge of the brook. The notes indicate the old corner was located in the NW $\frac{1}{4}$. And, since the creek was situated in a meandering channel, it is not likely that it was straight, in 80 years the location of the corner could have shifted.

10 PT's were found for the NW Cor for Sec 25 and 26. The SE $\frac{1}{4}$ of Sec 25 was not found. The Department of the Interior resources so the problem was one of establishing a straight line between the two section corners. The NW Cor was to be established and the 1/16 Cor for h of it was to be set, also.

The first 7 courses were run by Wil Aho and Hal Pasdook of P & A; the next 3, were by C. Forte Field of P & A and John Plesha and Jim of the USFS; the next 8, by C. Porterfield and Ralph Nelson of P & A and 2 brush cutters from Broughton Lumber Co; the balance was done by C. Porterfield and Andy Oster and Herb Hamblen of USFS.

The field work was completed and the points were located by July 20, 1970, but extreme difficulty was encountered in the setting of the monuments: i.e. extreme fire danger, storms, and backing over 250 lbs of concrete and water for monuments. Poor mixtures of concrete and a cat building a road caused the 1/16 corner to be set 4 times.
