MARK THE CORNER LOCATION ON THE DIAGRAM BELOW AND FILL IN THE CORNER CODE BLANK ON THE OTHER SIDE:

- (1) For corners located at the intersection of two lines (Section corners, quarter corners and 1/4-section corners):
  - (a) The corner code is the alpha-numeric coordinate from the diagram below that corresponds to the appropriate intersection of lines.
- (2) For corners that are not located at the intersection of two lines (Meander corners, D.C.'s, M.S.'s, reservation boundaries, mining claims, etc.):
  - (a) For corners that are on one line only the corner code is the line designation and the related line segment; i.e., a corner on line 5 between 'a' and 'c' is designated BC-5.
  - (b) For corners that are between lines the corner code is both line segments; i.e., a corner in the SE 1/4 of the SE 1/4 of section 18 is designated NW 4-5.
