TRAVERSE STATEMENT & SURVEY NARRATIVE: Lot corners were calculated and set from control previously completed for improvement of SR 14 in the City of Stevenson. That control was tied into GPS control points established by the Washington DOT with a 10" total station and related equipment, all of which met state standards (MAC 332-130-090) at the time of control. Row closure for the original traverse was in excess of 1:10000 and balanced by compass adjustment for final closure.

Block 5 was reconstructed using corners of record and physical features in order to obtain the most logical fit. Location of proposed SR 14 centerline to be used by DOT was held to create the north edge of the block. Corners recovered from Ref. 4 differed from the record and were held only for the south edge of the block. Field work conducted December 14, 1994.
