### FORM OF CLAIM FOR DAMAGES

TO THE BOARD OF COUNTY COMMISSIONERS of Skamania County, Washington:

PLEASE TAKE NOTICE that in accordance with Chapter 36.45 of the Revised Code of Washington, I William Thomas

hereby present you with my claim for damages against the County of Skamania, State of Washington, with the information required to be given by RCW 36.45.020 as follows:

1. That the injury for which I claim damages against the County of Skamania, State of Washington, occurred on or about the 15th day of June 19 99.

2. That the place of injury was Skamania County Transfer Site

3. That the location and description of the defect which caused the injury are exposure and inhalation of chemicals

4. That the injury is described as follows: See attached Summary of Claim and Settlement Demand

5. That the amount of damages claimed is as follows: \$15,000.00

6. That the actual residence of the claimant at the time of presenting and filing this claim is P.O. Box 1176, Stevenson, WA 98648

7. That the actual residence of the claimant for a period of six months immediately prior to the time that this claim accrued was Skamania County Jail

DATED: AUG 23<sup>rd</sup>

19 99

William Thomas

NOTE: Personal Property (Car, etc.) damages are to be accompanied by estimated repair costs. Additional information required by Nos 2-4 of this form may be attached on the back of this Claim for Damages.

**SUMMARY OF CLAIM AND SETTLEMENT DEMAND**

FROM: Jan C. Kielpinski  
Kielpinski & Woodrich  
40 Cascade Avenue #110

Stevenson, Washington 98648  
(509) 427-5665  
Fax (509) 427-7618

TO: County of Skamania  
Claims Department  
PO Box 790  
Stevenson, Washington 98648  
(509) 427-9447

CLIENT/  
CLAIMANTS: William Thomas

YOUR INSURED: County of Skamania

INCIDENT DATE: June 15, 1999

LOCATION: Skamania County Transfer Station  
Stevenson, Washington

**FACTS AND LIABILITY**

On or about June 15 1999, William Thomas was a trustee of the Skamania County Jail and was working at the Stevenson Garbage Transfer Station. While performing his duties in the capacity of trustee, he was called upon to move materials from place to place.

Acting in his designated capacity and as part of his duties, Mr. Thomas was required to move a bucket that appeared to be a paint bucket. The bucket slipped from his grasp causing the lid to become displaced exposing him to the contents. Upon exposure, Mr. Thomas inhaled toxic fumes from the contents which consisted of a chemical compound. Mr. Thomas' inhalation of the fumes caused immediate injury which was initially evidenced by irritation to his sinuses, throat and chest.

Mr. Thomas' exposure and inhalation was followed by severe discomfort and difficulty breathing accompanied by choking. The irritation and choking was so severe as to cause Mr. Thomas to cough up blood. An ambulance was summoned and Mr. Thomas was transported to Skyline Memorial Hospital.

Liability for negligence and maintenance of a nuisance is evident. Likewise, the proximate cause of Mr. Thomas' injuries is equally clear.

#### NATURE AND EXTENT OF INJURIES

William Thomas continued to experience respiratory discomfort and anxiety on route to the hospital. He was brought in code 3 by the ambulance crew and was given oxygen on route remaining at 100% throughout his transport. Subsequently, the substance to which Mr. Thomas was exposed was identified as a possible ammonia oxidant agent.

Observation and examination upon arrival disclosed him to be tachypneic and hyperventilating deeply. His nasal passages and pharynx were found to be pink. His voice was hoarse. He was placed on humidified oxygen in the emergency room.

After approximately 2 1/2 hours in the emergency room his voice returned to normal and his condition was noted to have progressed to complaints of a residual headache. Washington Poison Control was contacted and the case was reviewed. It was recommended that the patient be observed in the emergency room for possible increased symptoms.

Mr. Thomas was diagnosed as having post oxidant exposure and hyperventilation and was given Vicodin for his headache prior to discharge. He was instructed to return if his symptoms increased and was given computer instructions for toxic exposure.

Allen LaBarge, M.D. was contacted by Officer Joudrey at the Skamania County Sheriffs Department on behalf of William Thomas on June 21, 1999 as a follow up to his injury. Dr. LaBarge was advised that Mr. Thomas was experiencing shortness of breath and having some pain from his chemical exposure. Dr. LaBarge noted the pain Mr. Thomas was experiencing was likely secondary to healing.

Mr. Thomas was evaluated by Dr. LaBarge on June 22, 1999 due to persistent shortness of breath at rest and more so with exertion. Mr. Thomas was experiencing pain right in the center of his chest which increased with deep breathing or exertion. Mr. Thomas also had a headache and his sinuses and nose were raw.

Dr. LaBarge prescribed antibiotics for a possible infection resulting in Mr. Thomas' delayed onset of pain. Mr. Thomas was advised to seek care if he should have an increase of shortness of breath or did not otherwise improve over 7 - 10 days. If his symptoms worsen or did not improve Mr. Thomas was also advised to see a pulmonologist.

Mr. Thomas returned to Dr. LaBarge on July 27, 1999 for continued coughing spells which were productive of green - to - brown sputum. He continued to have chest discomfort with coughing, primarily in the substernal area which was worse with deep inspiration. Mr. Thomas continued to have severe headaches. Additionally Mr. Thomas experienced facial pain, primarily on the left side, purulent nasal discharge and ear discomfort. Overall Mr. Thomas reported not feeling well.

Mr. Thomas is scheduled for another follow-up visit in late August with Dr. LaBarge.

MEDICAL RECORDS

THOMAS, WILLIAM G.

06-15-99

S: Mr. Thomas was working at a garbage transfer station while being a trustee from the Skamania County Jail. He allegedly picked up a plastic bucket and dropped it and the top popped open and he inhaled some fumes from this bucket and immediately had irritation to his sinuses, throat and chest. He began coughing and feeling poorly and an ambulance was summoned to bring him to the hospital. He continued to have respiratory discomfort and anxiety on route to the hospital and was brought code 3 by the ambulance crew. He was given O<sub>2</sub> on route and his O<sub>2</sub> saturations remained 100% throughout his transport. Subsequent through contacts with Skamania County Sheriff's Office the substance involved was identified as a possible ammonia oxidant agent but specific variety could not be confirmed.

O: Mr. Thomas is an alert, WDN 30 y/o male. On arrival he is tachypneic and hyperventilating deeply. His color is pink and his skin is warm and very mildly diaphoretic.

HEENT: PERRL. TMs WNL. His nasal mucosa is pink. Pharynx is pink, no lesions or burns seen.

CHEST: Lungs are clear to auscultation. Heart rhythm is regular. No murmur or gallop heard.

ABDOMEN: Bowel sounds are active, soft, no guarding or masses.

LABS: Arterial blood gases were done on arrival which showed a pH of 7.623 and a PCO<sub>2</sub> of 18.9, O<sub>2</sub> sat of 99.7 and a PO<sub>2</sub> of 228.

ER COURSE: Mr. Thomas was placed on humidified O<sub>2</sub> after arrival in the ER. His respirations became rapidly more relaxed and regular and his distress gradually subsided. He was able to nap and after approximately 2 and 1/2 hours in the ER his only complaint was residual headache. His voice returned to a normal phonation as it had been initially slightly hoarse on arrival. The case was reviewed with Dr. LaBerge who also came in and saw the patient briefly and we felt it was safe for him to return to the custody of Skamania County Sheriff's Office. Washington Poison Control was contacted and the case was reviewed and it was recommended that he be observed in the ER for a while for possible increase in symptoms and felt that given the history that evaluation and treatment would be adequate.

I: Status post oxidant exposure. Hyperventilation.

P: He is released to the custody of Skamania County Sheriff. He was given a dose of Vicodin for his complaint of headache prior to discharge. He is to return for increased symptoms as needed. He is given computer instructions for toxic exposures.

06-30-99

PROBLEM: FU Chemical exposure

Thomas, William

S: Bill is back today. He is having no more pain, no more SOB, he worked out the other with no symptoms at all and he wants to return to full duty work.

He says he is getting hives every morning that really itch him and bother him. They last for a couple of hours and then go away. It started 3-4 days ago. No changes in his food or anything. He doesn't have them the rest of the day. I told him that we could give him some medication to treat them but by the time the medication kicks in to work, the hives are going away on their own, so I would just watch them for now.

O: Healthy male. WT 216. O2 sat 96% on room air. BP 110/70. Chest is completely clear. OP is clear. Neck is supple. CV normal S1 and S2. Skin with no rash right now.

A: Chemical exposure-inhalation. I don't think he is going to have any long term problems from this. Everything seems to be healed up at this time. Urticaria by history, etiology unclear.

P: He is released to full duty work. FU p.r.n.

Allen LaBerge, M.D./avl

07-27-99

Thomas, William

S: William here for a cough over the last three days. Productive of green-to-brown sputum. Reports he has chest discomfort with coughing, primarily substernal area. Worse with deep inspiration. C/O severe HA. Also some facial pain, primarily left side. Purulent nasal discharge and some ear discomfort. Denies fever but reports feeling overall not well.

PMH: History of chemical exposure to his lungs on 06/15/99. Also a history of smoking approximately half pack per day.

CURRENT MEDICATION: Amitriptyline.

ALLERGIES: Ibuprofen, NSAIDs.

O: Thirty year old male in NAD. Loose cough. HEENT-conjunctivae slightly injected. Nasal mucosa-moderate edema, slight erythema. Right TM clear. Left obstructed with cerumen. OP-slight erythema. One plus tonsillar edema. Positive cervical anterior adenopathy, nontender. Neck is supple. Lungs-faint rhonchi. Wheeze with cough and forced expiration. Heart-S1, S2; no M. Skin warm, slightly diaphoretic.

A: Sinusitis.

Bronchitis.

P: Augmentin 875mg b.i.d. x 10 days.

Phenergan with codeine 1-2 tsp q. 4. Four oz dispensed. Albuterol inhaler two puffs q. 4 p.r.n. SOB, cough and wheezing. Discussed proper use. Pt to FU if no improvement in symptoms in 2-3 days.

Deana Dahl, F.N.P./AL/mbe

06-21-99

Telephone conversation

Thomas, William

Telephone conversation with Officer Joudrey at Skamania Co. Sheriff Dept. Officer Joudrey told me that Bill is occasionally getting some SOB and having some pain from his chemical exposure last week. I would refer to his ER record from that day. Apparently some time last week he was working at the transfer station and a lid came off some type of chemical and he had an inhalant injury. I did see him in the ER several hours after that and he was doing pretty well.

I told Officer Joudrey that I think Bill would need to be seen on an urgent basis if he was having SOB that was lasting for other than just a short period of time. His pain is likely secondary to healing. I would be happy to see him in FU but since he is actually not SOB and not having a great deal of pain, I don't think he needs to be seen urgently.

Allen LaBerge, M.D./avl

06-22-99

PROBLEM: SOB, chest pain

Thomas, William

S: Bill was exposed to some probable ammonia oxidant while working at work crew at the transfer station a week ago today. He was evaluated at Skyline, I actually saw him there briefly before he left. He said he was doing pretty well until Sunday when he started get more pain and SOB. That stayed pretty much the same since Sunday. He continues to be SOB, a little bit at rest, more so with exertion. He also has a pain right in the center of his chest which is increased with deep breathing and exertion. He has a headache and he feels like the insides of his sinuses and nose are raw.

O: Pleasant healthy 31 y/o. O2 sat 98% on room air. BP 110/80. P 88. His nares are pretty erythematous. OP is a bit injected on the posterior pharynx. Neck is supple. Chest is clear but he seems to hesitate to take a real deep breath. CV normal s1 and s2.

Chest XR PA and lateral really looks pretty normal.

A: Chemical exposure, probable ammonia oxidant 1 week ago. I think he is essentially in the healing process. I told him as well as the deputy who was here with him, that the main thing I would worry about is increasing SOB. If the pain isn't improving over time that would also be reason to return. I suppose it is possible since he had this delayed onset of his pain that he has a little bit of an infection going on so I decided to go ahead and cover him with some antibiotics.

O: Keflex 500 one p.o. t.i.d. x 10 days.

RTC or seek care acutely should he have an acute increase of SOB, otherwise if not improving over 7-10 days he can RTC or they can give me a call. If things worsen or don't improve, I will probably have him see a pulmonologist.

Allen LaBerge, M.D./avl
