SMOOLE

GARY M. OLSON

TRAVERSE STATEMENT: An open field traverse for the parcel shown was made with a Sokkia five—second total station and related measuring equipment, all of which met State standards of WAC 332-130 at the time of this survey. Field work was conducted during the period of September 13 — November 14, 2000, the purpose of which was to monument the lines to clarify their location.

SURVEY NARRATIVE: Ties to monuments from Reference 1 were found bent, so do not fit their original positions. The centerline of the railway mainline was held as the basis of bearings with orientation to Reference 1 to establish deed calls. Great weight was given to the witness tree called at the rock ledge for the southeast corner. Deed calls do not fit the old iron pipe found near the northeast corner, which was calculated by holding deed calls from the southeast corner and the point of beginning; remaining deed calls were taken as given. The outholding is primarily dependent upon physical calls.

DESCRIPTION OF TOTAL PARCEL may be found in Book Z, P.447 of Deeds, AF#24817, which includes the following exception:

A strip of land, with right of way for a road way to the same, as follows:

beginning at a point on the southerly boundary equidistant from the southwest corner of the large white house and the southeast corner of the foundation of the porch of the little brown house; thence in a Northerly direction in a line parallel to the foundation of the two houses to a point lying 75 feet South of the right of way of the Spokane, Portland and Seattle Railway; thence in a Westerly direction lying parallel to the aforesaid railway right of way to a point in a line lying 50 feet (or more to the nearest five—foot mark) West of and parallel to the line dividing the lowland from the lowland of John F. Sweeney and Mary E. Sweeney to the East.
